QUIZ

Given:

```
render_template("index.html", grocery_list=items)
```

How do you access the template variable in **index.html**?

grocery_list

{{ grocery_list }}

👏 Correct! Note the double braces {{ }} for the delimiter.

{% grocery_list %}

{{ items }}

What statement is used to 'close' the content inside an `if` statement in a template?

{% end if %}

{{ endif }}

{% endblock %}

{% endif %}

👏 Correct! All statement delimiters have a closing block.

Which template filter will capitalize the first letter of every word in a string or template variable?

upper

title

👏 Correct! This capitalization format is known as 'Title Case'.

capitalize

first

Complete the `for` statement to iterate through the template variable `my_list`.

`{%` for x in `my_list` `%}`

👏 You got it!

Which directory does `render_template` look for template files?

templates

👏 Correct! The "templates" directory is where to store your files for your app to render.

render

index

html

To inherit from **base.html** template, what statement needs to be at the top of the working template?

{% extends content %}

{% block content %}

{% block "base.html" %}

{% extends "base.html" %}

👏 Correct! The content in the working template is "extending" **base.html**.
